Description

Young nursery plant, pseudo cydonia sisnensis that comes from seedlings. Height : about 30 to 40 cm. Diameter at the collar : about 3 to 5 mm depending on the plant. The qince tree is much appreciated by professionals and japanese amateurs for its pinky foliage in spring that turns to bright green in summer and red/orange in fal, but also for the beauty of its bark and the amazing brightness of its yellow fruits. The fast growth of this species is an asset because you can form big pices in little time. It is indispensable to shoose the style you want to give it from the first cultivation year. Placing ligature wires on this still flexible trunk will enable you to give it movement and to decide then of the future of this tree. We vively recommend you toi keep cultivating it in akadama soil with a mensual fertilization from May to November, with biogold or litlle balls fertilizer.
