Description

This plant captivates from early spring with its green foliage edged in yellow, bringing brightness and freshness to the garden. Its compact clumping habit, reaching up to 50 cm in height, makes it an excellent choice for borders, flower beds, or container planting.
The deep reddish-purple stems create a striking contrast with the variegated foliage, offering a refined and colorful display throughout the season. The lance-shaped leaves, approximately 20 cm long and 5 cm wide, give the plant a graceful structure. From early July, it produces lavender-blue flowers, adding a subtle floral touch to its already rich color palette.

Sold in 2 liter plastic pot.
