Description

For healthy green leaves on indoor and outdoor bonsai use this Biogold Vital treatment to give your trees a new lease of life. Quick and easy to use, apply it to deciduous trees, conifer vegetation and kusamono small plants.

Bottle 500ml. Undiluted, concentrated solution.

How to use: dilute 10ml to 30ml in 1 litre of clear water. Apply to the surface of the earth with a watering can, spray on leaves or leave plant pots to soak in the solution.

Spray on foliage 1 to 2 times per month. Rapidly absorbed. If the plant is particularly weak you can spray it once or twice every 10 days.

Spray on the earth once a month.

Soak seeds for one or two hours in the solution before sowing. This will ward off fungal attacks and aid root development.
