Description

For healthy green leaves on indoor and outdoor bonsai use this treatment to give your trees a new lease of life. Quick and easy to use, refill a spray bottle and apply the fertiliser to deciduous trees, conifer vegetation and kusamono small plants.

2 litre can containing concentrated solution. Dilute one 30ml capful into 3 litres of water. In total, you can make 200 litres of fertiliser.

How to use:

Spray on foliage 1 to 2 times per month. Rapidly absorbed. If the plant is particularly weak you can spray it once or twice every 10 days.

Spray on the earth once a month.

Soak seeds for one or two hours in the solution before sowing. This will ward off fungal attacks and aid root development.

Our range of Biogold granules complement this product.
