Description

Healing paste in a 200 gr tube, which is handy for applying directly onto the branch's wounds. The orange liquid can also be brushed onto large surfaces. It's valued in Japan for its healing fungal virtues and often applied twice a year on the whole trunk of stewartia (summer camellia) and other species when it's time to repair bumps and cracks due to mushroom diseases. It aids recovery and within one year you'll have a superb bark.
