Description

Tree Height: 280 mm. Branch Width: 160 mm.
High-quality unglazed pottery in brick color: Ø125*60 mm.

Subject originated from yamadori, cultivated for over 25 years to form a bonsai. Originating from Kentaro Shino's nursery in Shizuoka Prefecture.

A magnificent shari on the beautiful sinuous trunk has been created with harmonious branch trays. Itoigawa variety with thin, vibrant green scales, particularly robust, and perfectly suited for bonsai cultivation.

It only loses little foliage in early summer, unlike the juniperus chinensis type. Requires generous watering in summer and regular fertilization throughout the growing season.

Sold without its stand.

Photographed in August 2023.
